

## COLOCATION

Tier-1 Facilities Sydney - Melbourne - Australia

Whether you are looking to collocate your data, voice, and/or IP network, Conexim provides your business with the most advanced, secured and dedicated infrastructure to house your communication equipment. Conexim Colocation Services provide your business with access to a fully integrated and seamlessly connected network. Services include fully scalable bandwidth, secure facilities, redundant, network connectivity, and 24x7 monitoring and technical support. Plus, you retain the flexibility to administer and access your own equipment and applications without the complications of running your own data center.

### THE COLOCATION SERVICES

The Colocation services deliver the necessary infrastructure for your web hosting needs, including server storage and IP network connectivity. This enables your equipment to have access to high-capacity bandwidth as well as a direct connection to our rigorously engineered network.

### BENEFITS FOR YOUR BUSINESS

**Costs** - The costs associated with purchasing the bandwidth access and suitable environment to house your mission critical servers can be extremely expensive. Conexim has the infrastructure and economies of scale in providing and managing a world class colocation environment. By collocating your equipment in a Data Centre, you will also reduce the costs associated with expensive local loops to support large bandwidths.

**Environment** - Colocation provides the rack space for your communications equipment. Conexim gives you the quality, reliability, availability and redundancy of mission-critical operations monitored on a 24x7 basis. In addition, colocation provides carrier-grade centralised housing.

### DIRECT CONNECTION TO AUSTRALIAN AND WORLD-WIDE NETWORKS

The colocation facilities are directly connected to most Australian backbones and are directly peering with the world's largest IP transit backbone – MCI/Worldcom, providing reliable, unified and robust connectivity (both locally and internationally) and hosting options - Internet services, data services, voice and leased lines.

**Reliable Facilities** – Conexim colocation facilities adhere to high physical environment standards, maintaining persistent conditions for optimal equipment performance. This includes monitored air conditioning, fire and smoke detection and suppression systems to isolate and contain potentially hazardous incidents.

**Hardware** - Vented cabinets with security locks are provided to house and protect customer equipment. Additionally, multiple heavy-duty back-up diesel generators create a significant window for power restoration without loss of service.

**Security** – The Data Centre environments are highly secured using multi level security systems. Our facilities have manned security guards, who authorise every person requiring access. In addition, we have electronic security systems in place that monitor all activities round the clock in all critical areas of the facilities and control access.

**Monitoring and Support** – Conexim offers 24x7 monitoring and On-Site Technical Support services to all our customers.

**Focus** - Colocation services enable companies to concentrate on the content and applications for their business rather than on details of data center facilities and network infrastructure.

### **WHO IS CONEXIM?**

Conexim Australia Pty. Limited provides quality co-location services, business-grade web hosting, managed dedicated servers, and outsourced applications solutions.

Since its inception in 1993, Conexim has been renowned for providing its clients with quality, scalable and dependable solutions that meet and exceed their requirements.

The success of the business is fueled by its competent, knowledgeable and friendly staff, which helped the company gain its reputation for its quality and speed of service. As a result, our customers trust us to support and keep their businesses online.
